

Digital Accessibility Statement for UniTube (Planet eStream)

This accessibility statement applies to UniTube

UniTube is provided by Planet eStream on behalf of the University of Huddersfield. We want as many people as possible to be able to use this website. For example, you should be able to:

- change colours, contrast levels and fonts
- zoom in up to 300% without the text spilling off the screen
- navigate most of the website using just a keyboard
- navigate most of the website using speech recognition software
- listen to most of the website using a screen reader (including the most recent versions of JAWS, NVDA and VoiceOver)

We've also made the website text as simple as possible to understand.

[AbilityNet](#) has advice on making your device easier to use if you have a disability.

How accessible this website is

[Planet eStream's Accessibility Whitepaper Report](#) has identified the platform as WCAG 2.1 AA accessibility standard where applicable.

Known Limitations

The included Video Editing tools may have limitations for users with no vision, as it may not be possible to navigate the video content with sufficient accuracy to achieve desired end results.

The included Subtitle editor may have limitations for users with no hearing, as sufficient information (e.g., from lip reading or signing content) may not be available on a related video stream.

Planet eStream does however offer authorised users' access to automated audio transcription services within the standard web interface, providing an alternative to direct creation of subtitles. Subtitles produced by transcription services can subsequently be edited using the eStream Subtitle Editor.

Users may also be able to further address some aspects of the above limitations by use of specialist third party tools in conjunction with Planet eStream, as media content

and associated items including subtitles can be exported from and imported to the Planet eStream environment by authorised users.

Included video creation tools may have limitations for users with no vision in directly verifying suitability and quality of the actual video content being captured by the application.

Included video creation tools may have limitations for users with no hearing in directly verifying suitability and quality of the actual audio content being captured by the application.
